

Audio, AV & control that runs your venue — and keeps running on a packed Saturday night.

For Outer Banks restaurants, bars & venues. Designed, installed, programmed, and supported by one local pro.

CASE STUDY — PROOF IN THE FIELD

OBX-Scape Rooms

Escape-room & live
game-show venue · OBX

Escape rooms are some of the most demanding control environments anywhere — dozens of cues, sensors, sound effects, and triggers that all have to fire on time, every time, in front of a live audience. Jamieson Automation **built and programmed** the automation and A/V behind OBX-Scape Rooms, including a full **live game-show experience** from the ground up — the same networked-audio, control-logic, and integration skillset a venue needs, proven in a far harder room.

WHAT WE BUILT

- › Networked audio & sound-effect cueing (Q-Sys-class control)
- › PLC / automation logic driving lights, props & triggers
- › A/V playback, displays & show control
- › Business-grade network tying it all together
- › A complete live game-show experience, built new

WHY IT PROVES THE COMMERCIAL CASE

- › Show-critical reliability — it can't fail mid-game
- › Multi-zone, multi-source audio under real timing pressure
- › Scene/sequence programming, not just speakers on a wall
- › One person designed, built, programmed & still supports it
- › Local, ongoing — not a vendor who installs and vanishes

The takeaway: *if it holds up running a live escape-room and game show, your dining room, bar, and patio audio is well within reach — with the same person on the other end of the phone when you need a change.*

What that means for your venue: most bar and restaurant audio is consumer gear that can't zone, can't page over music, and needs a "guy" every time it breaks. We design the system properly, **program it to run itself**, and support it locally — so the patio, the dining room, and the bar each do the right thing without staff fighting a volume knob.

WHAT WE DO FOR RESTAURANTS, BARS & VENUES

1. Multi-Zone Audio

- › Independent volume & source per area — dining, bar, patio, restrooms
- › Background music that's actually controllable
- › Clean, even coverage — no dead spots or blown-out tables

2. Paging & AV

- › Page over music with auto-ducking (last call, staff, emergencies)
- › Sports/AV switching — any game to any screen
- › Projector/screen & source control for events

3. Control & Support

- › One-tap scenes: Open · Happy Hour · Live Music · Close
- › Scheduling (patio off at 10pm) & simple staff interface
- › Remote monitoring + local priority support plan

Why Jamieson, not just another **speaker installer**

Plenty of outfits can hang speakers and pull cable. Very few can truly **program and commission** a networked control system — scenes, paging logic, scheduling, and the network underneath. That control layer is exactly what we do, and it's what makes a system run itself instead of needing babysitting.

- ✓ Design, install, program & support — one source
- ✓ Networking specialists (the #1 cause of AV failures)
- ✓ Local & responsive — we answer the phone
- ✓ Hardware & labor itemized — transparent quotes

GOOD FIT IF YOU HAVE...

Multiple spaces (dining + bar + patio), live music or events, sports to manage across screens, or audio that drops, distorts, or takes a service call every time it hiccups. New build, remodel, or fixing a system that never worked right.

Let's walk your space and scope it.
