

FOR PROPERTY MANAGERS

Why rental-ready tech sells your rentals

Keyless entry and reliable guest wifi aren't amenities anymore — they're what your reviews quietly run on. Here's how getting the tech right protects your bookings, your ratings, and your weekends.

Two things drive more guest friction than anything else: **getting in the door** and **getting online**. When they fail, you get the 9pm call and the 3-star review — so we install both, per door, set up to keep working all season.

Keyless entry

The problem: lockbox codes that fail, keys lost on turnover day, scrambling to let a guest in remotely.

Done right:

Smart locks with codes that auto-generate per booking and expire at checkout. No keys, no lockboxes, no 9pm rescues.

Reliable guest wifi

The problem: "the wifi keeps dropping" — the single most common connectivity complaint, and a review-killer.

Done right:

Coverage checked at every corner, mesh or Starlink where needed, so streaming and remote work just work.

The rental-ready package — one install, per door

Smart lock

Auto guest codes, no keys or lockboxes

Reliable wifi

Mesh / Starlink, coverage to every room

Smart thermostat

Set temps between guests, cut energy waste

Cameras (exterior)

Entry/property monitoring, no privacy issues

Starlink

Real internet where cable won't reach

Set up to last

Configured right — not a box off a shelf

What it does for your portfolio

- ✓ Fewer access emergencies — codes that just work
- ✓ Fewer connectivity complaints — protects ratings
- ✓ Better reviews & faster turnovers — no key handoffs
- ✓ Remote control, scales per door — one standard

Why us

Most "smart lock dropped" problems are really **wifi coverage at the door** — so every install we do starts with the signal at the device, not just the gadget. That's the difference between tech that works on day one and tech that generates callbacks all season. We're local, we know the systems, and where OBX Lot Solutions already handles your property care, this is **the same trusted hands**.
